SABRE

ESCALATE YOUR AEROSOL

THE SABRE DIFFERENCE

Reduce force escalation by equipping your officers with SABRE. How? SABRE solves the three (3) problems for OC failures: Low Capsaicinoids; Inconsistent Heat Levels – Bad Batches; and Failure to Reach Target.

Increase Your Capsaicinoid Content – Higher capsaicinoid content sprays provide increased stopping power (more on page 4).

Guarantee Your Heat Levels – Eliminate OC failures which occur due to bad batches with SABRE. Security Equipment Corporation (SEC), the only OC manufacturer operating an in-house HPLC Laboratory, ensures capsaicinoid consistency in every canister (more on page 6).

Maximize Target Acquisition – Subjects duck, move, fight and attempt to block the spray. It does not matter how hot the spray is if you cannot hit the target acquisition area. SABRE duty belt canisters featuring Crossfire Technology will deploy from any position to increase target acquisition (more on page 8).

In addition, SABRE offers:

- Level I, Level II & Level III Formulations
- ISO 9001:2008 Certification
- Independent Laboratory Health Tests
- EPA & Health Canada Establishment
- Successful Track Record for Over Three (3) Decades
- Ultraviolet Marking Dye
- Increased Target Acquisition
- Extended Shelf Life (5 Years)
- Effective Decontaminate
- EID Compatible (Taser® & Stun Devices)
- Trusted and Used by Law Enforcement Agencies Worldwide
- Revamped Instructor Certification & Recertification Program

ABOUT SECURITY EQUIPMENT CORPORATION

"Making Grown Men Cry Since 1975" Security Equipment Corporation (SEC) is the family owned and operated U.S.A. manufacturer of SABRE pepper spray and SABRE safety products. After numerous requests, market research and testing, we decided to introduce SABRE Law Enforcement Aerosol Projectors in 1997. Agencies worldwide have switched to SABRE products because of SABRE's product performance, independent laboratory testing, quality control, HPLC guarantee, training and service. Security Equipment Corporation now operates four (4) aerosol lines dedicated exclusively to producing aerosol irritant projectors (AIP). We believe our exclusive focus on this category, our 35+ years experience and commitment to producing the best AIP possible; have made Security Equipment Corporation the global leader in our respected category.

Ultimately, most agencies have switched to our products due to performance and safety aspects. SABRE provides officers with the best AIP and the best chance to gain control of "goal oriented", alcohol and/or drug induced and emotionally disturbed subjects without the need to escalate to a higher level of force. Our commitment to research and testing will only allow us to improve on our superior products as we move forward. Our ultimate goal is officer safety and agency satisfaction.

PROJECTORS . . .
NOT YOUR LEVEL OF FORCE!

PERRY JOHNSON REGISTRARS, INC. ANAB ACCREDITED UKAS QUALITY MANAGEMENT 105

ISO 9001:2008 CERTIFIED

CHOOSE ONE OF SABRE'S SIX TO MEET YOUR HEAT

Reduce force escalation and injuries by increasing major capsaicinoids (MC)! SABRE RED is the most popular formulation!

Formulation	MC	Level	OC
SABRE Defense	0.33%	I	10%
SABRE 5.5	0.37%	I	5.5%
SABRE CS	N/A	II	1.5% CS Tear Gas
SABRE 5.0	0.67%	II	5%
SABRE Red	1.33%	III	10%
SABRE Advanced	0.33%	III	1.5% CS Tear Gas

	Raw SHU	OC %	Net SHU	MC
Hot	5,300,000	2%	106,000	0.71%
Hotter	15,000,000	1%	150,000	1.00%
Hottest	2,000,000	10%	200,000	1.33%

To determine the true SHU of your OC spray, multiply the OC percentage by raw SHU. For example, 10% OC, 2,000,000 SHU equals 200,000 SHU (2,000,000 x .10 = 200,000 SHU).

Don't Be Fooled! Read This!

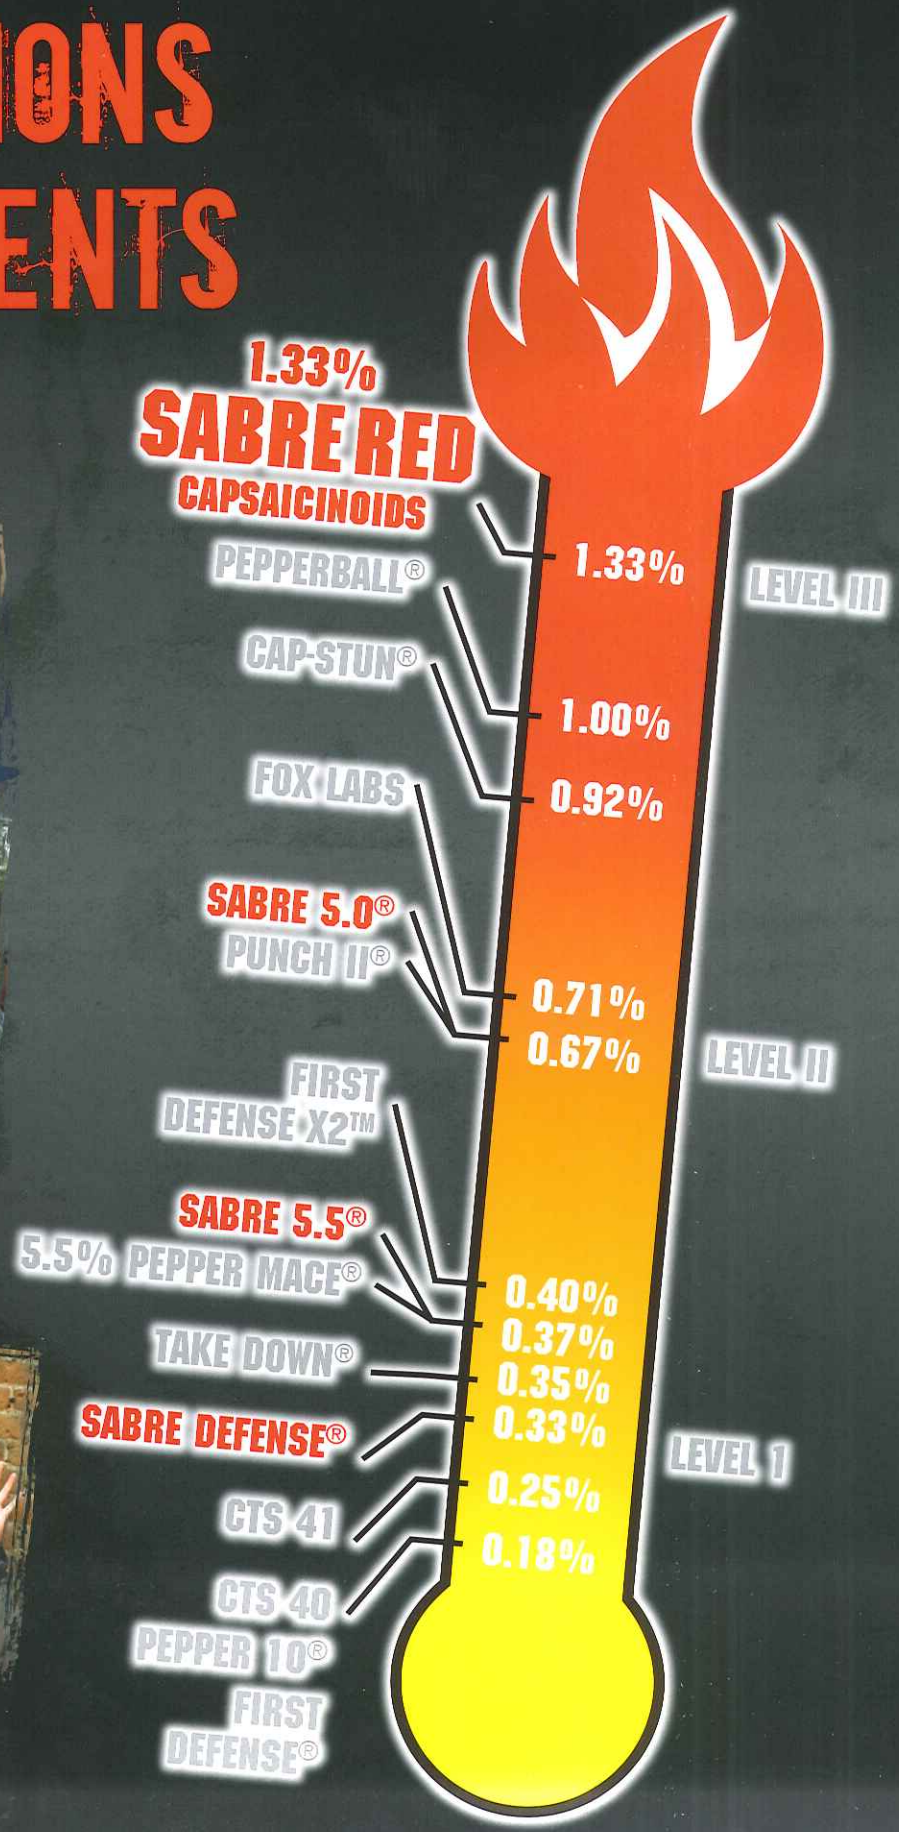
MAJOR CAPSAICINOIDS (MC) – This is what makes your OC spray hot! MC delivers pain, irritation, inflammation, coughing, temporary blindness and redness of skin. Measured via High Performance Liquid Chromatography (HPLC), MC is the only accurate strength indicator. MC represents the strength of the entire formulation or the spray which is projected from your canister. OC effectiveness increases with sprays containing higher MC content.

SCOVILLE HEAT UNITS (SHU) – Don't believe the hype. SHUs only measure the strength of raw OC which by the way is diluted from 90 to 98% percent! SHUs do not measure the strength of the spray projected from your canister! They are NOT an accurate measure of pepper spray strength.

OLEORESIN CAPSICUM (OC) PERCENTAGE – Only measures the amount of OC within the formulation. Who cares how much you use if it is not hot?

SABRE

FORMULATIONS REQUIREMENTS



HPLC GUARANTEE

You Want Reliability, Not Variability

The industry's biggest advantage, SEC is the only OC manufacturer operating a High Performance Liquid Chromatography (HPLC) laboratory in-house to provide capsaicinoid consistency in every canister and eliminate OC failures due to bad batches!

Think 14% of the population is not affected by OC? Think again.

The University of Utah's study confirms OC sprays fail 30% of the time due to bad batches. How do you correct this? With SABRE's guaranteed heat backed by our HPLC Laboratory.

Go to www.sabrered.com to view a copy of the University of Utah Study. Get the consistency and effectiveness you deserve with SABRE.

View our HPLC video at sabrered.com, click on HPLC link at bottom of Police Pepper Spray page.

RE: A.O.A.C. CAPSAICIN ANALYSIS ON SAMPLE -
SABRE RED 52H2O30
3.3 oz.

CERTIFICATE OF ANALYSIS

The sample identified above was run for Capsaicin content according to the protocol of the AOAC Procedure 995.03.

The sample was found to contain the following: 1.33 +/-0.010%, Total Capsaicinoids on a wt./wt. basis.

The RELATIVE Percentage of each capsaicinoid found in the sample is as follows:

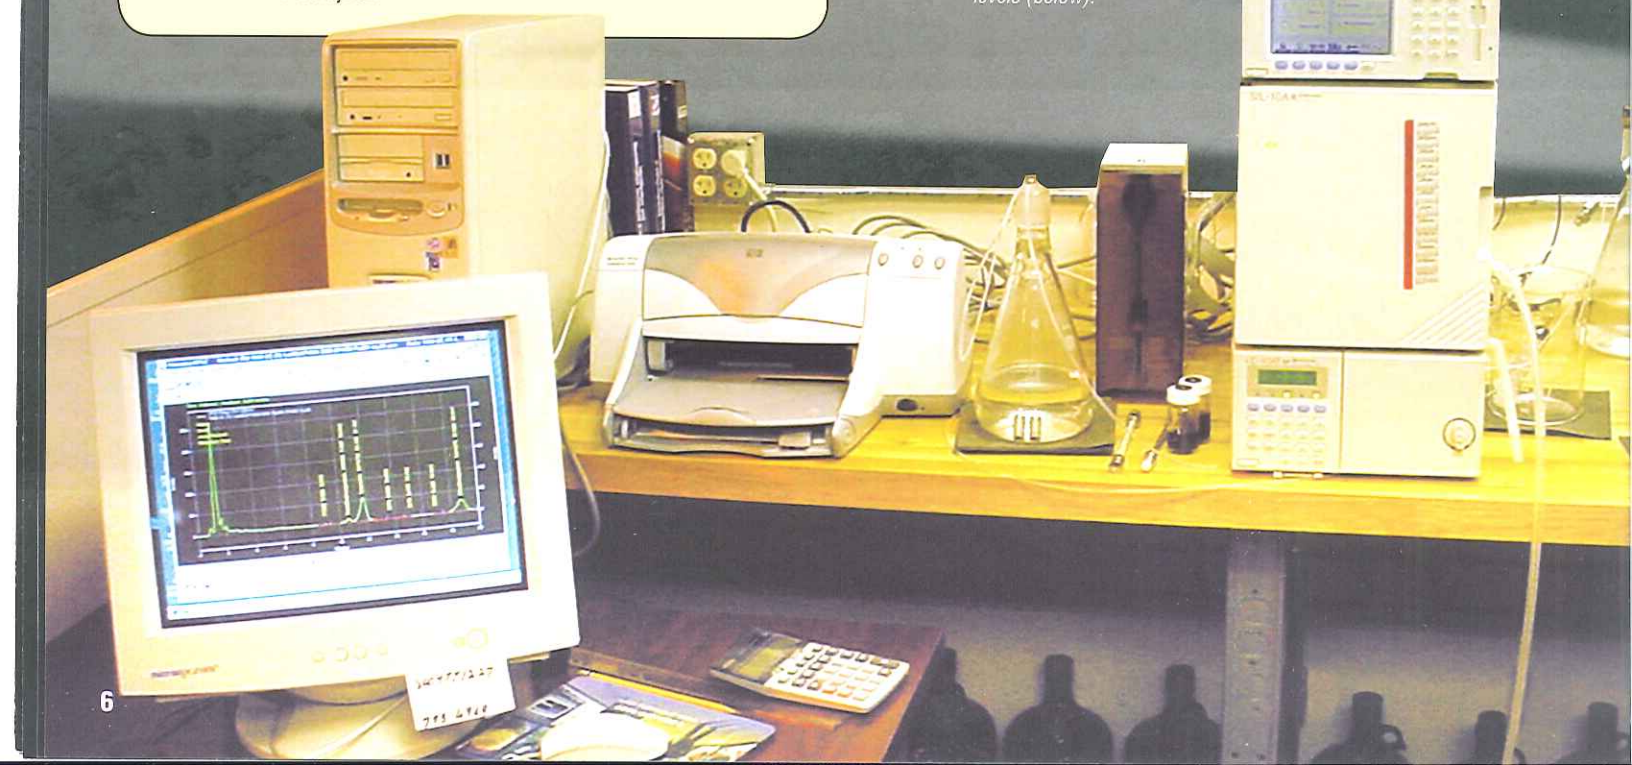
	RELATIVE %
Nordihydrocapsaicin (NDC)	6.33
Capsaicin (C)	55.82
Dihydrocapsaicin (DC)	38.65

The Scoville Heat Units (SHU) based on this assay calculates to 199,500.

Submitted By:
Martin Demmger
CHROMTEC

SEC's in-house testing and independent testing reports (above). Our in-house HPLC Laboratory guarantees consistent heat levels (below).

WARNING: Preparing pepper spray products without HPLC Analysis will likely result in varying levels of capsaicinoids with each shipment received by your agency. This variability impacts the effectiveness of the product and safety of both the user and subject.



SABRE ADVANTAGES

Level I, II & III Formulations

Each formulation incorporates the advantages common to SABRE products. Choose your ideal heat level.

TAC (Target Acquisition Confirmation)

Eliminate failures due to missed target acquisition! The natural OC pigment (shown at right) permits identification of contact area confirming if a second more accurate shot is required (see page 18 for proper spray techniques) and shows where not to touch.

Ultraviolet Marking Dye

Identify subjects up to 48 hour post contamination. The UV Dye is detectable on both skin & clothing.

EID Compatibility

All models listed in this catalog (stream, cone, foam, gel, and fog) are EID compatible (video and documentation available).

Reduce Injuries & Liability

Independent laboratory testing is imperative! Security Equipment Corporation backs its products with over 35 years of experience (1975) and the following tests:

- Acute Inhalation
- Dermal Irritation
- EPA Flame Extension
- Electronic Immobilization Device (EID) Compatibility
- Eye Irritation
- High Temperature Exposure
- High Performance Liquid Chromatography
- Low Temperature Exposure
- Leakage Prevention
- Test Deployment – Every Flip-Top Aerosol

ISO 9001:2008 Certified

The best 3rd party confirmation of SEC's commitment to OC excellence was recognized in December of 2004 as proof of its quality control program and efficiency.

PERRY JOHNSON REGISTRARS, INC. ANAB ACCREDITED UKAS QUALITY MANAGEMENT 105

Passed S&P Institute Testing

Only three of eight brands tested passed the Swedish National Laboratory's test performed for the Scandinavian Police Forces. SABRE was chosen as the exclusive OC spray for Denmark, Finland, Norway & Sweden.

Registered EPA & Health Canada Establishment

SEC has registered OC sprays with the Environmental Protection Agency & Health Canada ensuring our products are safe and effective.

5 Year Shelf Life/ Extended Shelf Life

SABRE sprays have an extended Shelf Life saving agencies time and money.

SABRE CROSSFIRE TECHNOL
MAXIMIZE TARGET

CROSSFIRE™ TECHNOLOGY

Continuous OC Deployment From Any Angle!

Static subjects are few and far between. Aggressive and non-compliant behavior often results in subject countermeasures to avoid officer control and restraint. When force escalation triggers the use of OC, subjects will frequently move, duck or attempt to block the spray. As these dynamic encounters ensue, the officer's task of gaining control becomes increasingly difficult. **SABRE's Crossfire technology was specifically developed to give officers the upper-hand when controlling dynamic subjects.**

Superior to 1st and 2nd generation Aerosol Irritant Projectors, **Crossfire introduces 3rd generation technology which allows SABRE OC canisters to deploy continuously from any position.** Picture the face of an analog clock which displays the time through the use of fixed numbered dials and moving hands. 1st generation OC sprays only deploy upright between the clock's 10 and 2 dials. 2nd generation OC sprays increase target acquisition with the addition of ½ second bursts deployments between the clock's 4 and 8 dials. The 3rd generation Crossfire will deploy continuously from any position or dial on a clock to maximize target acquisition when encountering dynamic subjects.

Crossfire will deploy vertically downward, from a horizontal position, if needed.

Crossfire is available in steam and gel delivery. Crossfire Gel is the ideal tool for reducing cross contamination in crowded public venues such as court rooms, airports, hospitals, and sporting events.

1st Generation 2nd Generation 3rd Generation

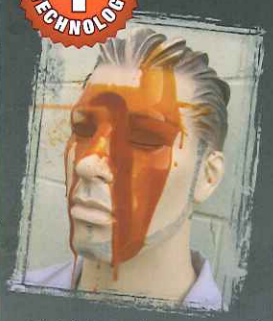
Non-Crossfire Technology stream, foam, and fog delivery systems are available using Generation 1 technology. Cone delivery uses Generation 2 technology.

OGY–
ACQUISITION!

GEL vs. FOAM

Delivery System	Point of Aim	Range	Plus	Minus
Foam	Circular Motion Center of the Face	10'	Reduced Cross Contamination & Great Facial Coverage	Decreased Range
Gel Crossfire	Ear to Ear Across the Eyes	20'	Reduced Cross Contamination & Increased Range	Requires More Accuracy

NEW OC + TECHNOLOGY



Gel (above) compared to foam (below).

Crossfire will deploy vertically upward, from a horizontal position, if needed.

- Gel & Foam are ideal for hospitals, airports, court rooms, government buildings, sporting events, and inmate transport. Gel is available in Crossfire and has greater range than Foam. Foam, although having less range, has greater facial coverage. Both reduce cross contamination. It is up to the user which one they prefer.
- Gel is available in the MK-3 & MK-4.

Inert training units featuring Crossfire Technology are also available.

SABRE DEFENSE SABRE 5.0 SABRE Red

Crossfire Stream is currently available with SABRE DEFENSE , SABRE 5.0, and SABRE Red formulations.

	SABRE DEFENSE	SABRE 5.0	SABRE Red	Competition
Level	I	II	III	I
Capsaicinoids	0.33% / 0.21% [-NY]	0.67%	1.33%	0.2%
MK-3 Shots	10 1-Second Bursts, 2.5x More Shots			6–8 Short Bursts
MK-4 Shots	16 1-Second Bursts, 2x More Shots			11–12 Short Bursts

CROWD MANAGEMENT

MK-9

5 YEAR SHELF LIFE

SABRE's MK-9 was designed for crowd management and cell extractions and can be carried in cruisers or with a convenient thigh holster. High Volume Streamers (HVS) and Foggers fire up to 25' – 30' (8 – 10 M). Foam models fire up to 12' – 15' (4 – 5 M).

MK-9 MODELS

SABRE DEFENSE

91H2O60. . . . . .16.0 oz HVS

CELL BUSTER

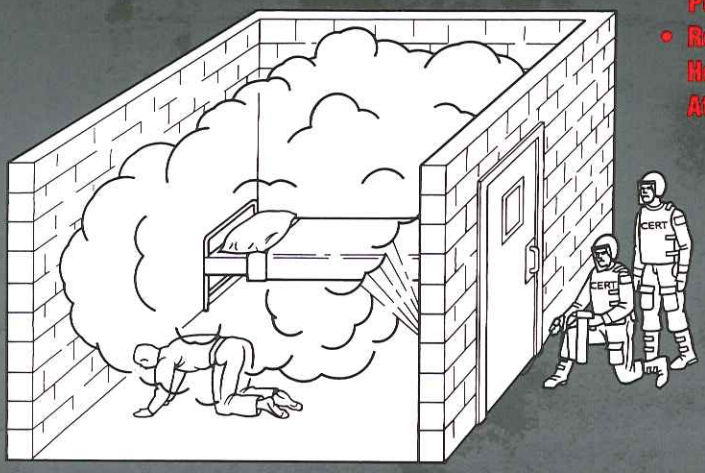
Reduce the need for "Hard Entries"!

Superior to High Volume Streamers, Cell Buster's High Pressure Fog Delivery does not require direct facial contact to incapacitate. Specifically designed to permit passive entries into cells, rooms, attics, storage areas, and buildings, Cell Buster will deploy OC underneath doors or through windows, food slots and vents.

USERS:

- SWAT / ERT / CERT / ARMED FORCES

- **Very Easy to Use**
- **Extremely Portable**
- **Reusable Hose & Wand Attachment**



Impressive Contamination Coverage

Pivot Point Allows Wand to Turn and Fit Under Doors

Thumb Grove Ensures Elbow is Pointed Upright for Greater Contamination Coverage

45° Elbow Reduces Puncture Injuries

Available Puncture Wand will pierce ¾" dry wall, wire mesh screen, some gauges of sheet metal, some gauges of aluminum siding, and mattresses.

AEROSOL GRENADES

Empties Up To 200% More OC Per Second!

DESIGNED FOR:

- Crowd Management
- Area Denial
- Area Extractions (Cells, Indoor Rooms / Attics / Crawl Spaces, Confined Areas / Barricades, Holes / Caves)

USERS:

- SWAT / ERT / CERT / ARMED FORCES

AVAILABLE SIZES:

AG-10 . . . . . 2 oz / 56 grams / 60 ml
Empties in 6 Seconds, Delivers 0.33 oz of OC per Second
10,000 Cubic Feet in 60 Seconds

AG-40 . . . . . 5 oz / 140 grams / 150 ml
Empties in 14 Seconds, Delivers 0.36 oz of OC per Second
22,000 Cubic Feet in 60 Seconds

Aerosol Grenade Horizontal Deployment & Distribution Pattern

Aerosol Grenade Vertical Deployment & Distribution Pattern

SABRE DECON

A Clean Face Never Felt So Good!

Wishing He Had Used SABRE DECON!

SABRE DECON Dramatically Reduces Effects of Chemical Agents!

SKEPTICAL? SO WERE WE!

Since the inception of SABRE Law Enforcement Aerosol Projectors, several proposed decontamination concepts have been presented to Security Equipment Corporation. These products enhanced pain, spread capsaicinoids increasing contaminated areas or did nothing at all. Due to their significant short comings, we declined to take these products to market.

WHY SABRE DECON WORKS

It is impossible to both clean and soothe the skin with a single formula. SABRE DECON effectively uses two unique solutions to combat the effects of chemical agents, prevents reactivation (exercising/hot showers) and further contamination of unwanted areas.

SABRE DECON CLEANSE

Removes chemical agents from the skin, prevents additional penetration into the pores and further spreading to unwanted areas.

SABRE DECON SOOTHE

Moistens cleansed skin treated first by CLEANSE – Step I and dramatically reduces the affects of chemical agents.

SABRE DECON = Much Faster & More Comfortable Recovery!

Right: Field Treatment Model
Far Right: Training Treatment Model

Patent Pending - 20060198806

FIELD TREATMENT MODELS

Ideal compact size for use on officers and subjects after deploying chemical agents to control subjects / inmates (Cruisers, In-Take Areas, Arsenal Room, EMS). **Decons approximately 6 people.**

SD-40 . . . . . 4.0 oz CLEANSE – STEP I & 4.0 oz SOOTHE – STEP II
SDC-40 . . . . . 4.0 oz CLEANSE – STEP I
SDS-40 . . . . . 4.0 oz SOOTHE – STEP II

TRAINING TREATMENT MODELS

Ideal large size for decontaminating multiple recruits or in-service officers after chemical agents contamination drills (Training Academies). **Decons approximately 200 people.**

SD-1G . . . . . 1 Gallon CLEANSE – STEP I & 1 Gallon SOOTHE STEP II
SDC-1G . . . . . 1 Gallon CLEANSE – STEP I
SDS-1G . . . . . 1 Gallon SOOTHE – STEP II

TRAINING PRODUCTS

Maximize OC Success by Mastering Proper Spray Techniques

Stream, Cone, Foam, and Gel training canisters available in all sizes. Replace 2nd digit of your live SABRE product with the number "0" and you have its training product counterpart. For example, training model for 52CFT10 (SABRE RED MK-3 Crossfire) is 50CFT10.

OC INSTRUCTORS How many hours do recruits spend on the range with their FTU Instructors before they are certified to carry? Some agencies require recruits to deploy 2,000 rounds. What time is spent ensuring they are ready to properly deploy OC? Which force option will they use more often? Maximize your OC effectiveness and reduce force escalation through utilization of SABRE Training Products!

TRAINING

Email info@sabrered.com to request a Host Agency Packet or to be notified of upcoming classes in your area! SABRE OC Instructor Certifications last three years (the competition only lasts 2 years).

SABRE Instructor Recertification is now available online. For more information or to register for the course, visit sabrered.com and click on Training & Training Products link at bottom of Police Pepper Spray page.

See Training video, visit sabrered.com and click on Training link at bottom of Police Pepper Spray page.

SABRE USAGE

Delivery System	Point of Aim	Range	Advantage
Stream	Ear to Ear Across Eyes	20 Ft	Increased Range
Cone	Up/Down Center of the Face	10 Ft	Excellent Facial Coverage
Foam	Circular Motion Center of the Face	10 Ft	Reduced Cross Contamination & Great Facial Coverage
Gel	Ear to Ear Across Eyes	20 Ft	Reduced Cross Contamination & Increased Range

Proper technique for cone (left), stream & gel (middle), and foam (right).

CIVILIAN SAFETY AWARENESS PROGRAM

SABRE's Non-Lethal Self Defense Program

Civilian Safety Awareness Program BY SABRE

Do you want to help your agency or business, your career and your community? Are you ready for a new challenge? Find out about becoming an instructor for SABRE's Civilian Safety Awareness Program (CSAP), call 800-325-9568 today! CSAP is designed to appeal to a wide audience, including: local businesses, community groups, social organizations, commuters, nurses, real estate agents, runners, college students, and many more. Attendees will…

- Learn how to Protect Themselves at a Safe Distance.
- Learn Risk Reduction Strategies to Reduce their Odds of Being Attacked.
- Learn the best Self Defense Technique to Escape an Attacker.
- Obtain Muscle Memory to Help Protect Them during High Stress Encounters.
- Learn the 10 Steps to use Pepper Spray the Right Way!

SEC teamed up with elite law enforcement instructors to design a program specifically to maximize civilian safety.

Although every SABRE canister is packaged with instructions on how to use the product, the techniques presented to avoid attacks and the practical training drills executed during simulated attacks give CSAP students knowledge and experience to live smarter and safer.

RAINN RAPE, ABUSE & INCEST NATIONAL NETWORK

Security Equipment Corporation makes a donation to RAINN (Rape, Abuse & Incest National Network) for each student completing the SABRE Civilian Safety Awareness Program.
