NOTICE OF BUDGET HEARING

The governing body of
Mineral Township
Cherokee County
will meet on July 17, 2025 at 6:30 PM at Country Loft, 2193 NE Center Star Rd, Columbus for the purpose of hearing and answering objections of taxpayers relating to the proposed use of all funds and the amount of ad valorem tax.
Detailed budget information is available at Cherokee County Clerk's office and will be available at this hearing.

BUDGET SUMMARY

Proposed Budget 2026 Expenditures and Amount of 2025 Ad Valorem Tax establish the maximum limits of the 2026 budget. Estimated Tax Rate is subject to change depending on the final assessed valuation.

	Prior Year Actual 2024		Current Year Estimate 2025		Proposed Budget 2026

Time to fertilize tomatoes, deadhead flowers, aerate lawn to prevent thatch

•Continued from Page 4

fate. Blood meal contains primarily nitrogen but has other elements as well.

Apply one of the following fertilizers at the rate provided:

• Nitrate of soda (16-0-0): two-thirds pound (one and a half cups) fertilizer per 30 feet of row

• Blood meal (12-1.5-.6): 14 ounces (one- and three-quarter cups) fertilizer per 30 feet of row

• Urea (46-0-0): four ounces (one half cup) fertilizer per 30 feet of row

• Ammonium Sulfate (21-0-0): one half pound (one cup) fertilizer per 30 feet of row

Alternatively, lawn fertilizer, free of weed killer/preventer, can be used at a rate of one third pound (three quarter cup) fertilizer per 30 feet of row. Choose a fertilizer that is about 30 percent nitrogen (the first number in the set of three).

Fruit Reminders

For the best harvest this year, here is some fruit tree maintenance to complete.

• Thin fruit on apple and peach trees. Fruit should be six-eight inches apart.

• Remove suckers from the base of fruit trees and grape vines.

• Water as needed. During hot weather, one inch of water per week is the recommendation.

• Comb (position) grapevine shoots to prevent tangling and promote more uniform sun exposure.

• Follow disease and pest management protocol. For more information about fruit sprays see our KSRE Publication: Spray Guide for Growing Stone Fruit at Home.

Rust on Hollyhock Flowers

Description: Hollyhock rust is a fungal disease that is most prevalent on hollyhocks, but other members of the mallow family are also susceptible. The fungus is introduced by infected plants. Fungal spores can travel by wind and splashing water as well. Warm, humid weather supports the fungal growth. The fungus can overwinter on infected plant debris and spread to new plants in the spring.

Symptoms: Orange-yellow spots develop on the lower leaves and sometimes brown spots will appear on stems. Raised bumps that are reddish-brown later develop on the undersides of leaves beneath the orange-yellow spots. These are the reproductive structures of the fungus. The infected leaves may develop holes and eventually die back.

Control: Prevention is the best approach against hollyhock rust. Begin with healthy plants each year and remove all plant debris from the previous growing season. Allow adequate spacing between plants so the fungus is less likely to spread if one plant is infected. Water at the soil level and avoid splashing on the plant.

If a plant develops rust, remove the infected leaves immediately and dispose of them. Plants that have a history of infection may benefit from a preventative fungicide when the weather is warm and humid. Spray every two weeks until the weather is dry. Sulfur and myclobutanil (Immunox, Monterey Fungi-Max, F-Stop Lawn & Garden Fungicide) are recommended. If the temperature rises above 85 degrees F within 24 hours of application the sulfur treatment may cause damage to treated leaves.

Rose Trouble

Several counties are reporting problems with their roses. One of those problems is rose rosette virus. The classic symptoms that may appear include:

• Rapid elongation of a new shoot

• "Witches' broom" (clustering of small branches)

• Branches develop excessive thorns

• Small, deformed, reddish-purple leaves

• Certain varieties may develop streaks or blotches of reddish-purple on stems and petioles

• Plant death

Infected plants, including the roots, should be removed and destroyed. Garden tools that come in contact with the plant need to be sterilized to avoid spreading the virus.

Rose blackspot has also been reported. Blackspot is a fungal disease that can cause these symptoms:

• Dark, circular lesions with feathery edges on top surface of leaves (usually lower leaves are infected first)

• Raised, purple spots on young canes

• Yellowing between spots on infected leaves

• Leaf drop

Prevention is the best approach for controlling blackspot. Purchase resistant cultivars of roses. Use drip irrigation to avoid splashing water on the leaves. Ensure roses are planted in the sun with good air movement. Don't crowd plants together in a planting. Diseased leaves should be removed from the ground and infected plant parts should be pruned out of the plant.

If you choose to apply fungicide you can treat on a 10-14-day schedule. Some recommended fungicides include tebuconazole (Bayer Disease Control for Roses, Flowers and Shrubs), myclobutanil (Immunox, Immunox Plus), triticonazole (Ortho Rose & Flower Disease Control) and chlorothalonil (Broad Spectrum Fungicide, Garden Disease Control). As always, follow all label instructions carefully.

Deadheading Flowers

Deadheading is a method of pruning out old flowers. This practice allows plants to direct their energy to new growth and producing new flowers rather than creating seed. The frequency this needs to be done depends on the plant variety and the environmental conditions. Some plants do not require deadheading at all. Lobelia, Impatiens, Hibiscus and Oxalis are examples of plants that are "self-cleaning" (do not require deadheading).

For plants that benefit from deadheading, use sharp, sterile pruners and cut the stem below the spent bloom just above the next node. The node is the area of the stem where the leaves extend. For plants such as Gerbera daisies that have a bloom atop a long stem, cut the stem down to the base of the plant. Some plants can be deadheaded using just your forefinger and thumb to remove the old flowers. Petunias are one example of this.

In the fall you may consider leaving blooms intact to allow plants to set seed and feed the birds.

Thatch Control in Warm-Season Lawns

Ornamental plants need to be cleaned up periodically as leaves and blooms die back. The same is true for grass. As grass plants grow, older plant material falls away to the soil level and can build up. This is called thatch, and it can become problematic if it is thicker than one half inch.

A thick layer of thatch can restrict water infiltration and reduce the efficacy of pesticide/herbicide treatments. When thatch accumulates, grass plants tend to root into this layer instead of deeper into the soil. Since thatch dries quickly, the lawn will suffer from drought stress. Kentucky bluegrass, zoysiagrass, bermudagrass and creeping bentgrass are the varieties of turf most likely to be affected by thatch buildup.

Power-raking and core-aerating are the best strategies for preventing thatch buildup. For warm-season grasses, it is best to do this in June or July when the lawn is actively growing and can recover from thinning more efficiently. If the thatch is one-half to three-quarter inches thick, core aerating can be done. Repeat passes with the aerator until the holes are about two inches apart.

If thatch is thicker than three-quarter inches, it will need to be power-raked. Set the blades of the rake only deep enough to remove the thatch so the lawn is not severely damaged.

Thatch can be prevented by fertilizing properly and avoiding excessive nitrogen applications. Water to the root zone and only as needed. Mow at the recommended height.

Effects of too much Rain

After multiple heavy rains across many parts of Kansas, gardeners are likely to assume watering won't be needed for quite some time. However, watering may be needed much sooner than you expect.

Excessive rain can drive oxygen out of the soil and drown the roots. As the weather gets hotter and drier the plants with damaged root systems may be poorly suited to take in water and shows symptoms of drought. Monitor your plants for signs of wilting and leaf scorching and water as needed.

Usually, supplemental water is needed once per week depending on the weather. Plants should be watered deeply, and soil should be moist but not waterlogged.

Boy breaks arm while hitching up mules

•Continued from Page 4

12 years old, received a fractured left arm at his home near Hallowell yesterday. He was hitching up a team of mules preparatory to going to the field to work, when one of the mules, in trying to shake the flies off, threw his head violently to one side, striking the boy. Dr. Henderson of Hallowell brought the boy to Dr. L. W. Baxter's office in Columbus for an X-ray.

Scammon, June 23 - Word was received here from Lucille Morton and Thelma Keiter that they drove from Scammon to Los Angeles in six and a half days, visiting the Grand Canyon and other sights along the way. Miss Morton and Miss Geiter, who made the trip in a new Buick, drove 359 miles in one day. They plan to visit for two months in California and return to Scammon by way of the northern route.

It was an unlucky thing for A. Greenback and family of Quapaw, Oklahoma, that he was caught jay driving (wrong side of road) on the southeast corner of the square last night in Columbus. Marshall Gribble arrested Greenback, who is an Indian, and took him to Police Court. At city hall, an examination of his car disclosed the fact he had a jug of liquor in the car and a bottle of some other kind of alcohol.

Police Judge Guy Cooter sniffed the bottle and said, "Unless my nose deceives me, that is some kind of brandy. It doesn't smell like whiskey." The first charge placed against Greenback was for jay driving and would have cost him $1 plus costs, but with the liquor found in the car the charge was $100 plus 30 days in the county jail. In liquor cases, the city attorney gets $25, same as the county attorney. Total costs in the case will make the expense to Greenback about $135.
