-------------	---	-------------------------------------

**Bacterial Filtration Efficiency (BFE)
and Differential Pressure (Delta P) Final Report**

Test Article: 100 gm Microfilament Fabric
 Study Number: 1267389-501
 Study Received Date: 13 Feb 2020
 Testing Facility: Nelson Laboratories, LLC
 6280 S. Redwood Rd.
 Salt Lake City, UT 84123 U.S.A.
 Test Procedure(s): Standard Test Protocol (STP) Number: STP0004 Rev 18
 Deviation(s): None

Determine the filtration efficiency of test articles by comparing at article to the bacterial counts downstream. A suspension of a nebulizer and delivered to the test article at a constant flow rate was maintained at 1.7 - 3.0 x 10⁷ colony forming of 3.0 ± 0.3 µm. The aerosols were drawn through a six-stage impaction. This test method complies with ASTM F2101-19.

Measure the breathability of test articles by measuring the differential pressure across the test article using a manometer, at a constant flow rate. The Delta P test complies with ASTM F2100-19.

Testing was performed in compliance with US FDA good manufacturing practices (21 CFR Parts 210, 211 and 820).

Flow rate (L/min)
 Test duration (L/min)
 Test humidity (RH) and 21 ± 5°C for a minimum of 4 hours

James W. Luskin
 Study Completion Date: 26 Feb 2020
